OVERVIEW

Bulk data export/import is an advanced management function, intended to provide more flexibility when making large scale changes to portal data.

- Users can export portal data to Excel, edit it as desired, and then import the changes back into the portal.
- Users can also bulk import new data by downloading one of the 'Empty XLSX Template' files, populating it, and then importing the information into the portal.

This function is limited to the following generic rules:

- It is only available to administrators who have been explicitly granted the "Bulk export/import data" role permission.
- Users can only use this bulk function to edit or create data that they have the role permissions to do via the existing portal UI, e.g., if a user cannot edit devices via the portal UI, then they cannot use this bulk function to do so.
- Due to the limitations inherent in Excel, dates and times in the exported/imported spreadsheets will be in UTC only.
- Hidden columns or rows are deemed as 'present' and will be read during import.

General Guide

MENU

Access to the bulk export/import function is via a 'System Administration' menu item:

The screenshot shows the HP Smart Device Services Manager interface. On the left, the 'System Administration' menu is expanded, showing 'Bulk Import/Export' as a sub-item. The main content area displays the 'Bulk Import/Export' form with three sections: 'Download Empty XLSX Templates', 'Export', and 'Import'. The 'Export' section is active, showing 'Export Type' as 'Customers' and a 'Next' button. The 'Import' section shows 'Import Type' as 'Devices' and a 'Choose file' button. The 'Download Empty XLSX Templates' section shows a 'Download' button. On the right, the 'Import Runs' table is displayed, showing a list of import runs with columns for Run ID, Run Date, Submitted By, Import Type, XLSX Lines Processed, Status, and Status Reason.

Run ID	Run Date	Submitted By	Import Type	XLSX Lines Processed	Status	Status Reason
85	12-Nov-2021 09:58:17	ekmmatt	Devices	8	Completed	
84	11-Nov-2021 12:42:44	ekmmatt	Devices	7	Completed	
83	11-Nov-2021 09:45:36	ekmmatt	Devices	7	Failed	Validation processing was halted
82	11-Nov-2021 09:44:26	ekmmatt	Devices	7	Failed	Validation processing was halted
81	11-Nov-2021 09:43:30	ekmmatt	Devices	6	Failed	Validation processing was halted
80	10-Nov-2021 16:42:34	ekmmatt	Devices	0	Failed	Internal system error
79	10-Nov-2021 16:41:37	ekmmatt	Devices	0	Failed	Internal system error
78	10-Nov-2021 16:35:43	ekmmatt	Devices	0	Failed	Internal system error
77	10-Nov-2021 16:34:14	ekmmatt	Devices	7	Failed	Validation processing was halted
76	10-Nov-2021 13:21:16	sonelle	Devices	5	Failed	Data sheet does not contain any i
75	10-Nov-2021 10:56:35	ekmmatt	Devices	0	Failed	Internal system error
74	10-Nov-2021 10:53:35	ekmmatt	Devices	0	Failed	Internal system error
73	09-Nov-2021 14:39:01	ekmwayne	Customers	3	Completed	
72	09-Nov-2021 14:36:45	ekmwayne	Customers	3	Failed	Validation processing was halted
71	09-Nov-2021 14:36:13	ekmwayne	Customers	3	Cancelled by User	
70	09-Nov-2021 14:35:26	ekmwayne	Customers	273	Failed	Validation processing was halted
69	09-Nov-2021 12:54:26	ekmwayne	Customers	272	Cancelled by User	
68	09-Nov-2021 12:52:28	ekmwayne	Customers	272	Failed	Validation processing was halted
67	09-Nov-2021 12:51:45	ekmwayne	Customers	272	Failed	Validation processing was halted
66	09-Nov-2021 12:42:47	ekmwayne	Customers	272	Cancelled by User	

Note: This menu is only visible to users with the "Bulk export/import data" role permission.

The page accessible from this menu provides access to all import/export features:

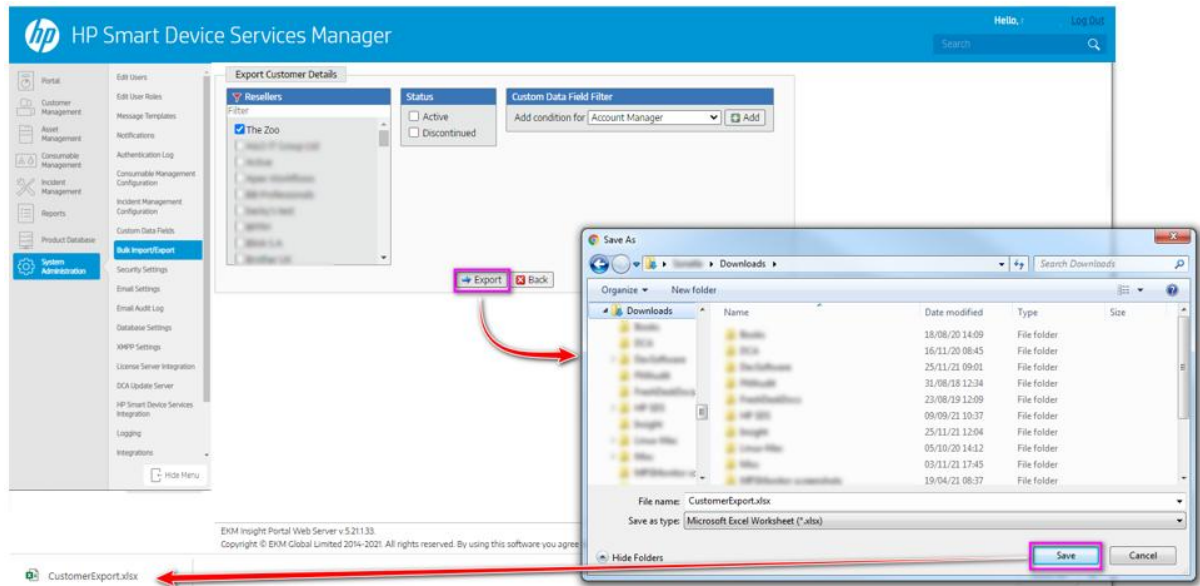

- Downloading empty XLSX templates for use in bulk creation of data.
- Exporting existing data to XLSX for editing and re-importing, or simply for archival.
- Importing new or edited data from the downloaded/exported XLSX files.
- Viewing import run history.

EXPORTING DATA

- Select the export data type and click 'Next'.

The screenshot shows the 'Bulk Import/Export' form. The 'Export' section is active, showing 'Export Type' as 'Customers' and a 'Next' button. The 'Import' section shows 'Import Type' as 'Devices' and a 'Choose file' button. The 'Download Empty XLSX Templates' section shows a 'Download' button. A red arrow points to the 'Export Type' dropdown menu, which is labeled 'Select Export Type'.

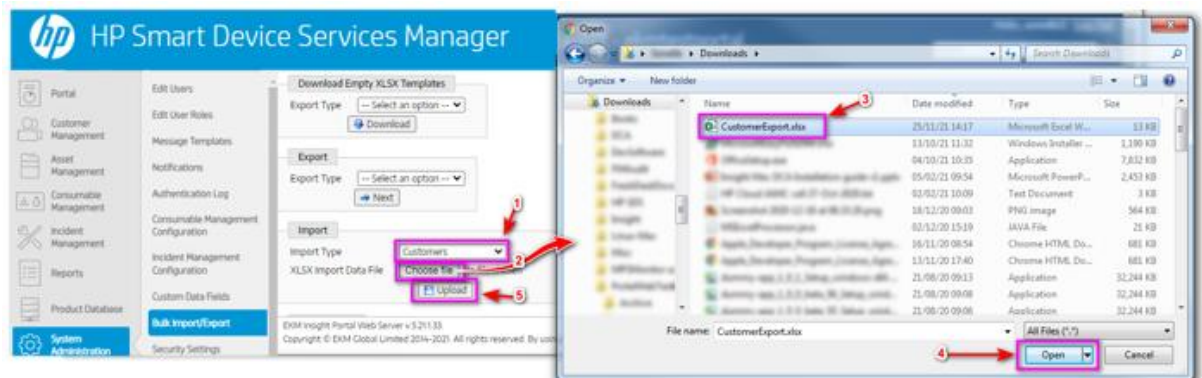

- Select the filter criteria and click 'Export'.

IMPORTING DATA

Once the XLSX file has been edited and saved it can be uploaded back to the Portal to apply changes made.

1. Select the appropriate data type and upload the XLSX file to the portal for validation.

2. If the file has any validation errors, processing will halt, and the errors found so far will be displayed.

Bulk Import/Export

Validation processing was halted - Data sheet validation errors found.

Import Run : 89	
Import Type	Customers
Submitted By	
Status	Failed
XLSX Lines Processed	3
XLSX Line Summary	Errors 2 Being Validated 1

Errors	
XLSX Line No	Error
3	E3 - Status contains invalid value: Z
4	M4 - #account_manager contains invalid value: Pod

Details of any validation errors found

3. Correct any errors and return to step one to re-upload the corrected XLSX file. If there are no validation errors a preview screen will be displayed.

NOTE: at this stage portal data has not yet been updated

Bulk Import/Export

The imported sheet has been validated, please review the sample of proposed updates, below, before continuing.

Import Run - 88

Import Type	Customers
Submitted By	
Status	Valid
XLSX Lines Processed	3
XLSX Line Summary	Unchanged 2
	Valid Changes 1

WARNING: The information below is only a preview. Nothing will be saved until you press the "Continue" button.

Examples of proposed import data

Customers

XLSX Line No	Reseller	Customer Name	Status	Contact Name	Contact Email	Contact Telephone	Address	City	Post Code	Country	Account Manager
4	The Zoo	Pandas	Active	Mr Bear		111 111111	1 Bamboo Way	Ailuropoda	GP1 00Z	Sichuan	

- Review the sample proposed changes, and if you are happy, click 'Continue' to complete the import and update the portal's data. **NOTE:** for certain imports, e.g., monitor creation, it is possible for errors to occur at this stage if the external systems that need to be accessed to acquire licence keys are not available. In this case, please retry the import later.

DETAILED REFERENCE

XLSX FILE LAYOUT

Each import XLSX file consists of several sheets:

Reseller	Customer Name	Status	Contact Name	Contact Email	Contact Telephone	Address	City	Zip Code	Country	Account Manager
The Zoo	Mammals	X	Reginald Fox							
The Zoo	Pandas	A	Mr Bear	bear@pandas.com	111 111111	1 Bamboo Way	Ailuropoda	RP1 00Z	Sichuan	
The Zoo	Prachy Creations	A								Prof. Chondrichthyes

Valid Values sheets

- Data – this contains the data to be imported. Please do not rename this sheet.
- Info – this contains information about the download/export that is used during the validation stage of the import. Please do not rename this sheet or edit its contents.
- 'Valid Values' sheets – these may be included in the export for information if there is a predefined list of valid values for a particular column in the data sheet. These sheets will be ignored on import.
- Additional sheets – If desired, users may add their own sheets while editing. These sheets will be ignored on import.

DATA SHEET LAYOUT

The primary sheet used during import is the 'Data' sheet.

- Only one Data sheet is permitted per imported XLSX file.
- The two header lines must always remain at the top of the Data sheet (as exported/downloaded).
- Do not edit the contents of any exported cell that is coloured grey.
- Columns may be shuffled into a different order if desired.
- Additional columns may be added, if desired, while editing the data. They will be ignored on import, so long as the second (grey) heading row column is left blank.
- Due to limitations inherent in Excel, dates and times will be in UTC only.

CUSTOMER IMPORT

The specifics of which customer import columns are mandatory, which are editable or not, and under what circumstances, are detailed here:

Column Name	When editing existing data	When importing new data
Checksum	Hidden Column – required Do not delete column Do not edit contents	Hidden Column – required Do not delete column Leave contents blank
Record Id	Hidden Column – required Do not delete column Do not edit contents	Hidden Column – required Do not delete column Leave contents blank
Reseller	Column – required Do not delete column Do not leave blank	Column – required Do not delete column Do not leave blank
Customer Name	Column – required Do not delete column Do not leave blank	Column – required Do not delete column Do not leave blank
Status	Contents will be used if column is present on import	Contents will be used if column is present on import
Contact Name	Contents will be used if column is present on import	Contents will be used if column is present on import
Contact Email	Contents will be used if column is present on import	Contents will be used if column is present on import
Contact Telephone	Contents will be used if column is present on import	Contents will be used if column is present on import
Address	Contents will be used if column is present on import	Contents will be used if column is present on import
City	Contents will be used if column is present on import	Contents will be used if column is present on import
Post Code	Contents will be used if column is present on import	Contents will be used if column is present on import
Country	Contents will be used if column is present on import	Contents will be used if column is present on import
*Custom field columns	Contents will be used if column is present on import	Contents will be used if column is present on import
*User columns	Column will be ignored	Column will be ignored

MONITOR IMPORT

The specifics of which monitor import columns are mandatory, which are editable or not, and under what circumstances, are detailed here.

Note: As of Portal version 5.21.1.35 Monitor import supports the creation of new monitors.

Column Name	When editing existing data	When importing new data
Checksum	Hidden Column – required Do not delete column Do not edit contents	Hidden Column – required Do not delete column Leave contents blank
Record Id	Hidden Column – required Do not delete column Do not edit contents	Hidden Column – required Do not delete column Leave contents blank
Reseller	For information only Contents ignored if column is present on import	Column – required Do not delete column Do not leave blank
Customer Name	Column – required Do not delete column Do not edit contents	Column – required Do not delete column Do not leave blank
Monitor	Column – required Do not delete column Do not edit contents	Column – required Do not delete column Do not leave blank

DELIVERY LOCATION IMPORT

The specifics of which delivery location import columns are mandatory, which are editable or not, and under what circumstances, are detailed here:

Column Name	When editing existing data	When importing new data
Checksum	Hidden Column – required Do not delete column Do not edit contents	Hidden Column – required Do not delete column Leave contents blank
Record Id	Hidden Column – required Do not delete column Do not edit contents	Hidden Column – required Do not delete column Leave contents blank
Reseller	For information only Contents ignored if column is present on import	Column – required Do not delete column Do not leave blank
Customer Name	Column – required Do not delete column Do not leave blank	Column – required Do not delete column Do not leave blank
Location Name	Column – required Do not delete column Do not leave blank	Column – required Do not delete column Do not leave blank
Address Line 1	Contents will be used if column is present on import	Contents will be used if column is present on import
Address Line 2	Contents will be used if column is present on import	Contents will be used if column is present on import
Address Line 3	Contents will be used if column is present on import	Contents will be used if column is present on import
City	Contents will be used if column is present on import	Contents will be used if column is present on import
County	Contents will be used if column is present on import	Contents will be used if column is present on import
State/Province	Contents will be used if column is present on import	Contents will be used if column is present on import
Post Code	Contents will be used if column is present on import	Contents will be used if column is present on import
Country	Contents will be used if column is present on import	Contents will be used if column is present on import
Contact Name	Contents will be used if column is present on import	Contents will be used if column is present on import
Contact Telephone	Contents will be used if column is present on import	Contents will be used if column is present on import

Contact Email	Contents will be used if column is present on import	Contents will be used if column is present on import
Site Manager	Contents will be used if column is present on import	Contents will be used if column is present on import
Comment	Contents will be used if column is present on import	Contents will be used if column is present on import

DISCOVERY RANGE IMPORT

Note: Import of discovery ranges for very old DCA monitors, pre 7.20.2.4, is not supported.

The specifics of which discovery range import columns are mandatory, which are editable or not, and under what circumstances, are detailed here:

Column Name	When editing existing data	When importing new data
Checksum	Hidden Column – required Do not delete column Do not edit contents	Hidden Column – required Do not delete column Leave contents blank
Record Id	Hidden Column – required Do not delete column Do not edit contents	Hidden Column – required Do not delete column Leave contents blank
Reseller	For information only Contents ignored if column is present on import	For information only Contents ignored if column is present on import
Customer Name	For information only Contents ignored if column is present on import	For information only Contents ignored if column is present on import
Monitor	Column – required Do not delete column Do not edit contents	Column – required Do not delete column Do not leave blank
Discovery Range Id	For information only Contents ignored if column is present on import	Not required Contents ignored if column is present on import
Discovery Range Name	Contents will be used if column is present on import Do not leave blank	Column – required Do not delete column Do not leave blank
First IP Address	Column – required Do not delete column Do not leave blank	Column – required Do not delete column Do not leave blank
Last IP Address	Column – required Do not delete column Do not leave blank	Column – required Do not delete column Do not leave blank
Status	Contents will be used if column is present on import Blank defaults to pre-existing value	Contents will be used if column is present on import Blank defaults to 'Enabled'
