

HP JAMC Installation Guide

Document Revision 1.5

Document Overview

This guide includes:

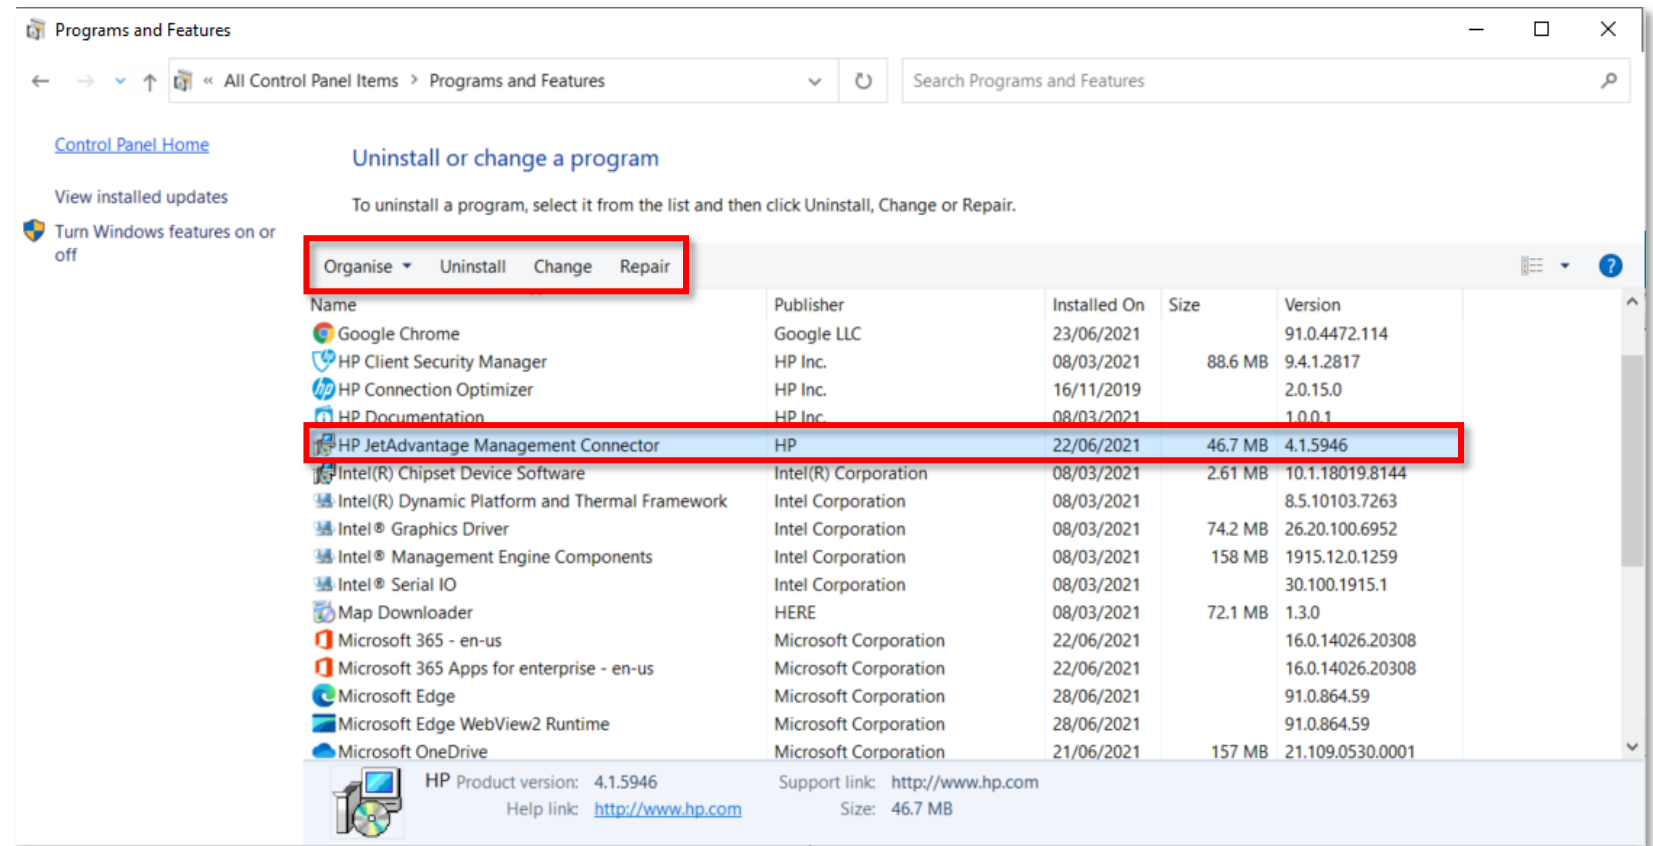

- [Uninstall Existing JAMC](#)
- [Installation](#)
- [JAMC status](#)

Uninstall Existing JAMC

From version 7.20.2.23 of the SDS Monitor release, the installer will automatically detect and uninstall any existing JAMC from the host machine as part of the installation process.

On previous versions of the SDS Monitor release, it will be necessary to manually uninstall the existing HP JAMC from the Control Panel, or from Windows Apps & Features.

JAMC Installation

Download the latest installer version from the Portal Dashboard.

Show all

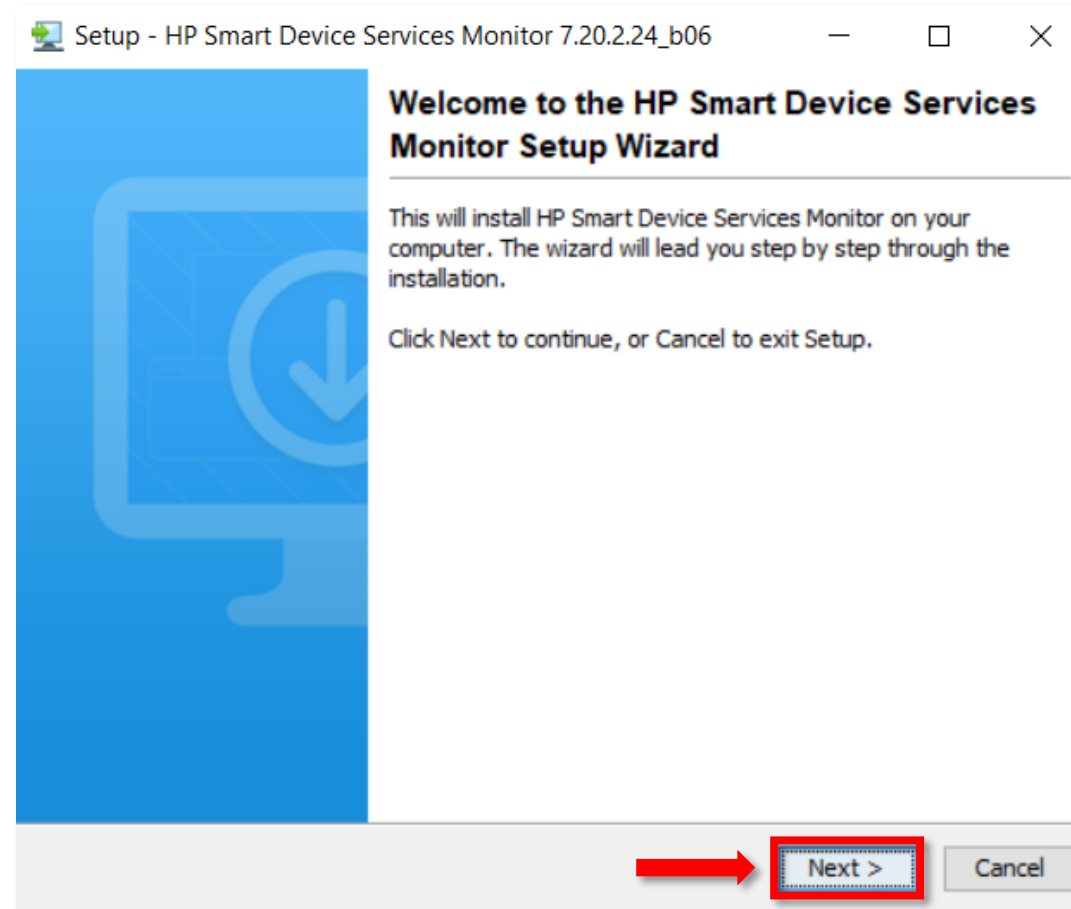

Run the Installer

Click to run the installer, select a language, and then press **'OK'** to proceed.

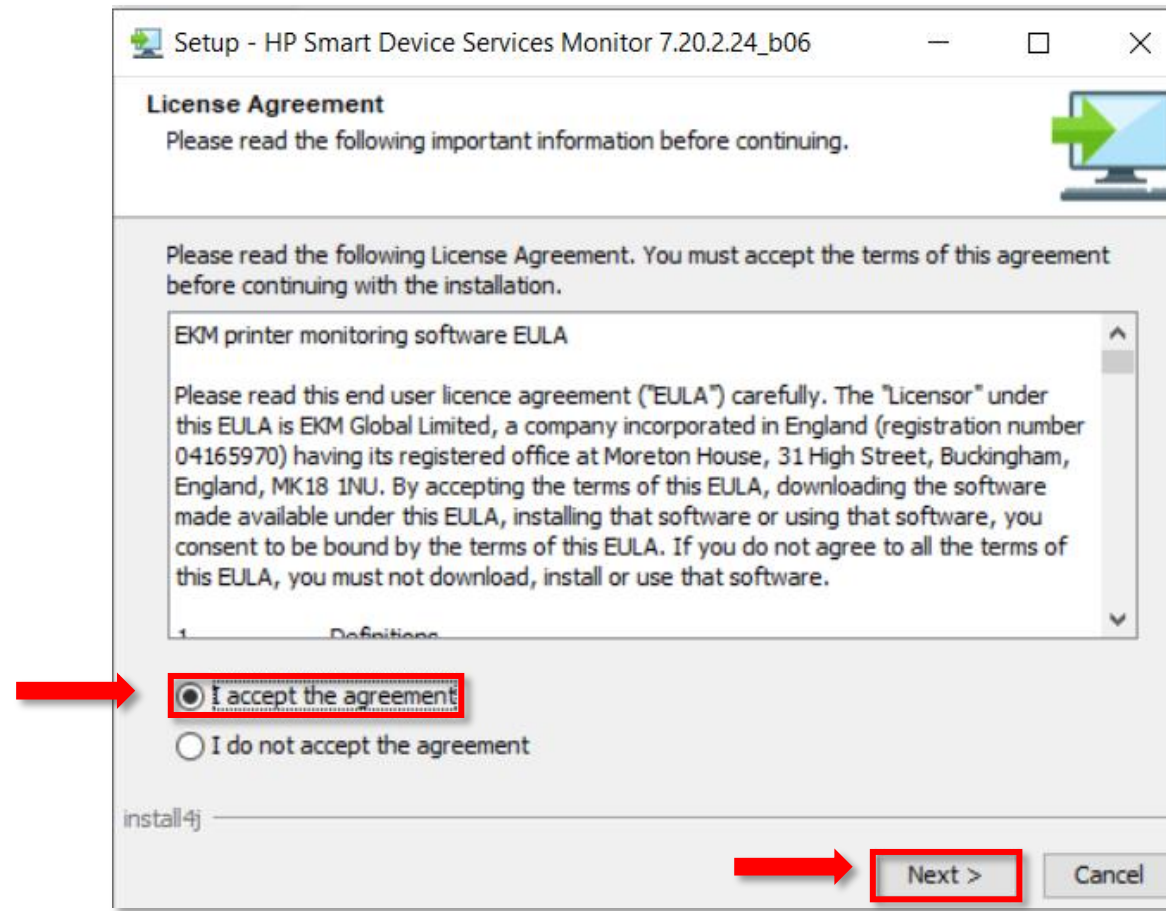

Welcome to the HP SDS Setup Wizard

Press **Next** when “**Welcome to the HP Smart Device Services Monitor Setup Wizard**” window appears.

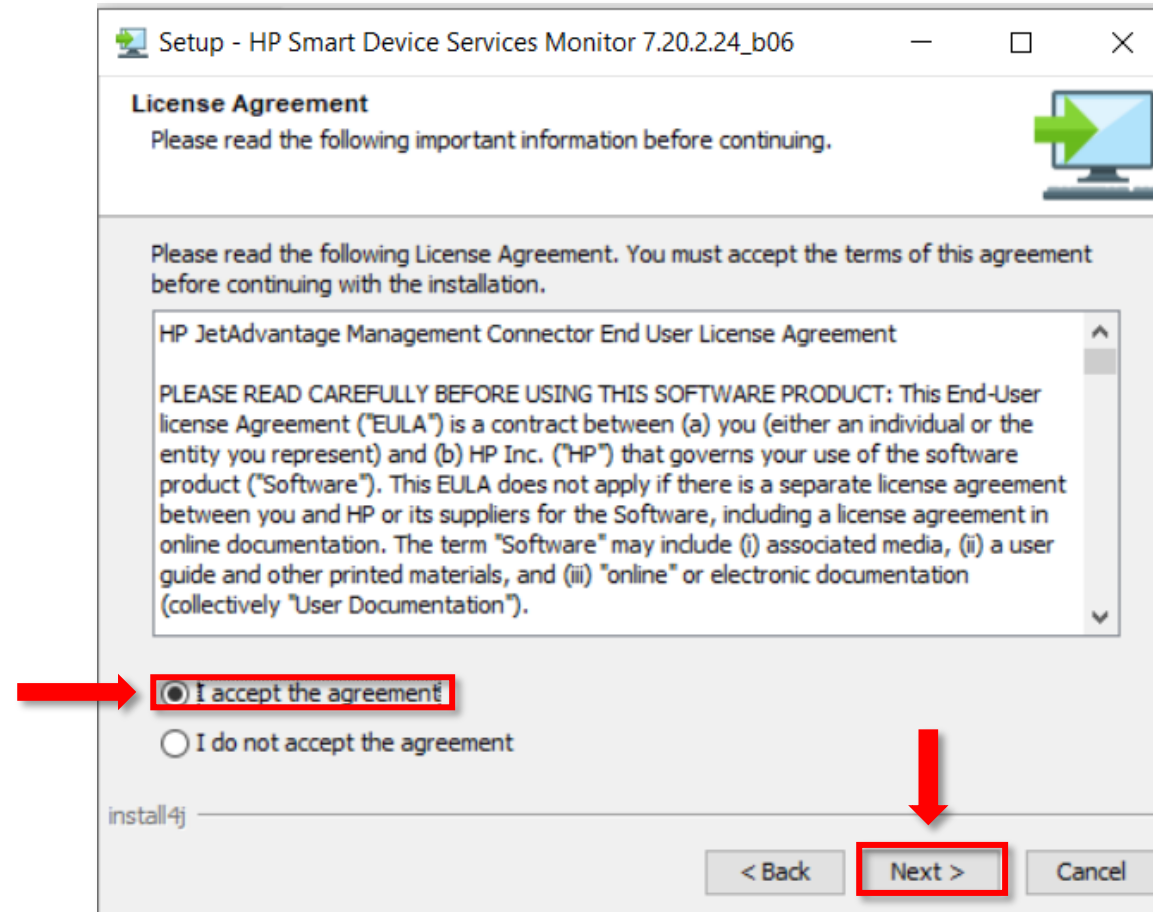

Accept the Agreement

Click **“I accept the agreement”**
and click **Next**.

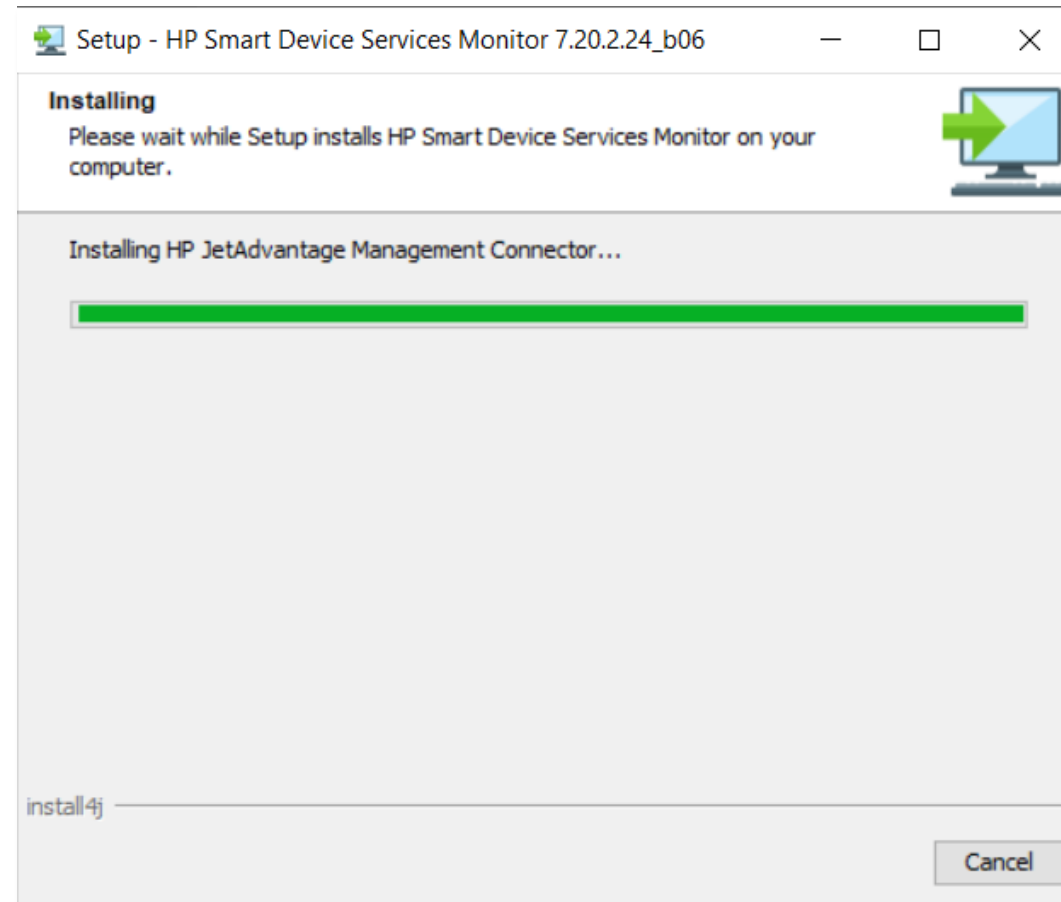

Accept the Agreement

Click **“I accept the agreement”** for the JAMC, and then click **Next**.

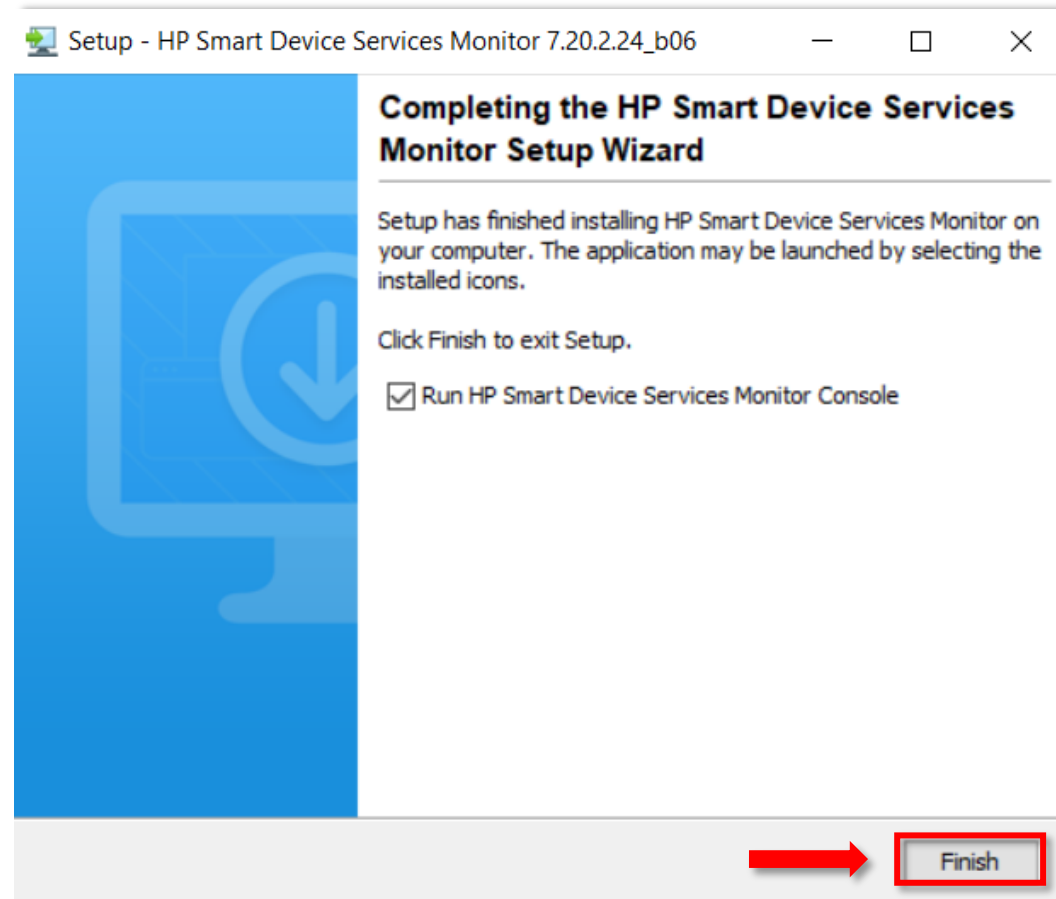

JAMC Installation

The JAMC will now begin to install.

Setup Complete

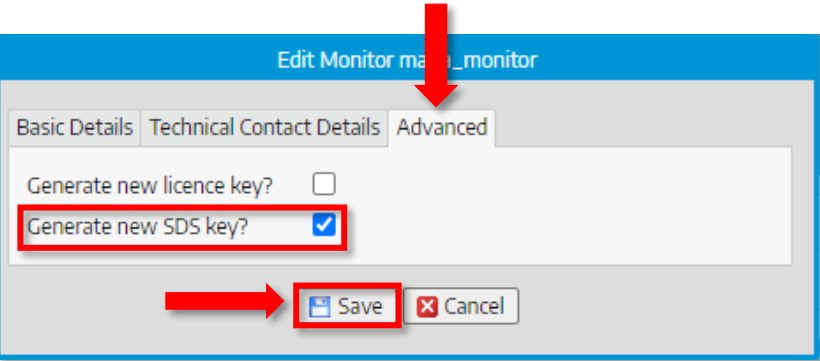

Once the setup has finished installing HP Smart Device Services Monitor, click **Finish**.

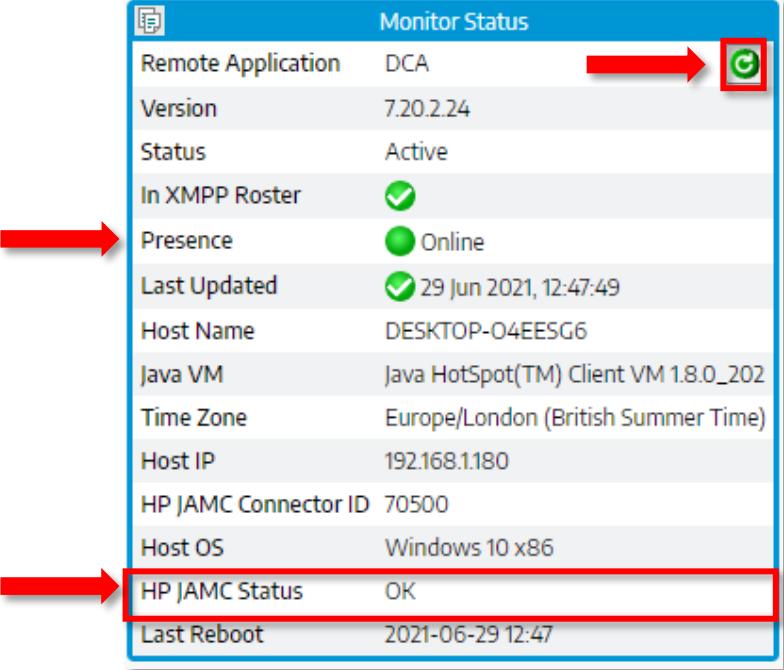

JAMC Status

After some time the JAMC status should change to “OK”. If the status shows as “**Not Registered**”, Edit the monitor and go to the Advanced tab. Select “**Generate new SDS key**” and then Save.

The monitor will then need to be restarted remotely 

Provided that all of the required URLs have been whitelisted (as stated in our White Papers documentation), then the JAMC status should show as ‘OK’ once the monitor comes back online.

Note: The HP JAMC Status only includes the JAMC and whether it is communicating successfully with the HP SDS Cloud. All other sub features, which are not part of the core JAMC functionality, will not affect the HP JAMC Status result.

Help and Support
